

Grant Park Multi-Alternative Strategies Fund
Q1 2022 Summary

As of 3.31.2022

GPAIX
Q1 2022: +3.68%

	<u>3-Year</u>	<u>5-Year</u>	<u>Overall</u>
Annualized RoR	9.17%	7.13%	5.82%
Standard Deviation	5.83%	7.77%	7.64%
Correlation: Stocks*	0.31	0.36	0.31
Correlation: Bonds*	0.29	0.39	0.42

Fund inception: 12.31.2013 *Stocks: S&P 500 / Bonds: Barclays Global Agg

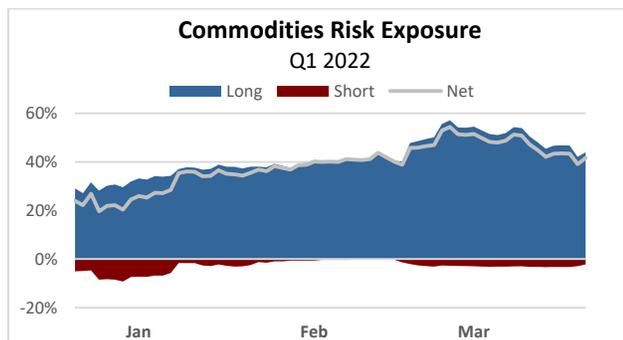

Positive performance for the Grant Park Multi Alternative Strategies Fund (Ticker: GPAIX) was driven by profitable opportunities across global commodities and financial markets.

The Fund successfully navigated heightened volatility and erratic price movement across all sectors. Rising inflation and interest rates provided opportunities for the Fund to profit in long commodities and short fixed income and currencies positions. The Fund experienced minimal losses in equities and actively managed risk throughout the quarter.

Risk Exposure by Sector

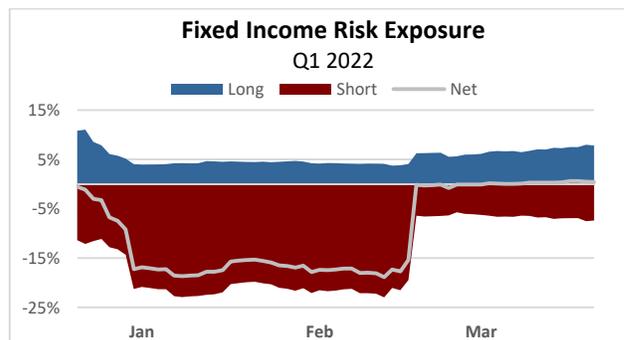

Commodities

	Jan	Feb	Mar	Q1 '22
Return	+0.69%	+1.20%	+3.39%	+5.30%

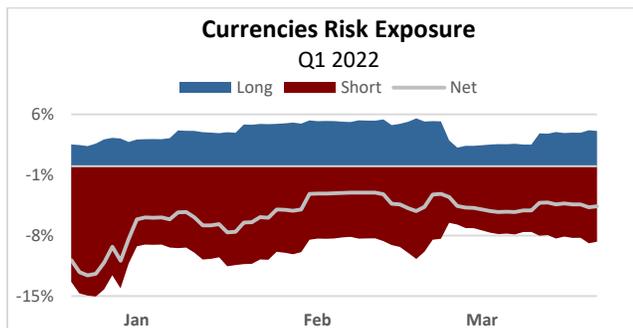

Fixed Income

	Jan	Feb	Mar	Q1 '22
Return	+0.74%	+1.02%	-0.45%	+1.32%

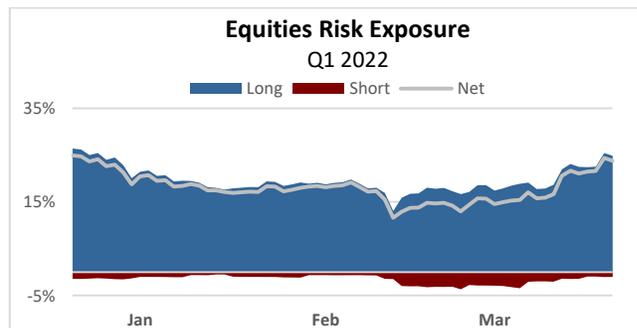

Currencies

	Jan	Feb	Mar	Q1 '22
Return	+0.21%	-0.24%	+0.42%	+0.39%

Equities

	Jan	Feb	Mar	Q1 '22
Return	-1.37%	-0.33%	+0.06%	-1.63%

Sector performance will differ from Fund performance due to income earned in the cash management portfolio

All charts prepared by Dearborn Capital Management. The indices shown are for informational purposes only and are not reflective of any investment. As it is not possible to invest in the indices, the data shown does not reflect or compare features of an actual investment, such as its objectives, costs and expenses, liquidity, safety, guarantees or insurance, fluctuation of principal or return, or tax features. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. Investments cannot be made in an index. Unmanaged index returns do not reflect any fees, expenses or sales charges. Past performance is no guarantee of future results.

Historical Fund Benefits

The Fund's Q1 diversification and efficiency benefits are similar to its long-term characteristics. GPAIX can be used as a potential solution for investors looking to address fixed income and equity concerns.

Low Volatility: GPAIX annualized standard deviation

Positive Returns: Annualized returns

GPAIX Historically Provided:

- Long-term positive returns and low volatility.
- Diversification across commodity, fixed income, currency and equity sectors.
- Independent returns that reduced portfolio downside risk.

Minimal Down Capture:

- Over the last three years, GPAIX provided positive value when stocks and bonds experienced losses.
- Since inception, GPAIX avoided significant stock and bond downside risk.

Thank you for your support.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Grant Park Multi Alternative Strategies Fund. This and other important information about the Fund is contained in the Prospectus, which can be obtained by calling 855.501.4758. The Prospectus should be read carefully before investing. The Grant Park Multi Alternative Strategies Fund is distributed by Northern Lights Distributors, LLC., member FINRA/SIPC. Dearborn Capital Management is not affiliated with Northern Lights Distributors, LLC.

There is no assurance that the fund will achieve its investment objectives. Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. There is a risk that issuers and counterparties will not make payments on securities and other investments held by the Fund, resulting in losses to the Fund. Derivative instruments involve risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

There could be an imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract or the fund may have to sell at a disadvantageous time. The success of hedging strategies depends on the Adviser's or Sub-Adviser's ability to correctly assess the correlation between the instrument and portfolio being hedged and may result in loss.

In general, the price of a fixed income and U.S. Government security falls when interest rates rise. Currency trading risks include market risk, credit risk and country risk. Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards.

Sovereign debt investments are subject to the risk that a governmental entity may delay or refuse to pay interest or repay principal. Using derivatives to increase the Fund's combined long and short exposure creates leverage, which can magnify the Fund's potential for gain or loss. Short positions may be considered speculative transactions and involve special risks, including greater reliance on the Adviser's ability to accurately anticipate the future value of a security or instrument.

Underlying Funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in an Underlying Fund. By investing in commodities indirectly through the Subsidiary, the Fund will obtain exposure to the commodities markets within the federal tax requirements that apply to the Fund, which may be taxed at less favorable rates than capital gains. The Subsidiary will not be registered under the Investment Company Act of 1940 ("1940 Act") and, unless otherwise noted in the Prospectus, will not be subject to all of the investor protections of the 1940 Act.

Certain Fund investments may be difficult to purchase or sell, preventing the Fund from selling such illiquid securities at an advantageous time or price. The fund may have investments that appreciate or depreciate significantly in value over short periods of time, causing the fund's value per share to increase or decline over short periods of time.

Glossary

Standard Deviation: A measure of investment risk that examines the variation of returns around the mean return. Higher volatility equates to higher standard deviation.

Down Capture: A statistical measure of an investment manager's overall performance in down-markets. The ratio is calculated by dividing the manager's returns by the returns of the index during the down-market and multiplying that factor by 100.

Correlation: A statistical measure of the degree to which two securities move in relation to each other. Correlations are computed as the correlation coefficient, which has a value that must fall between -1.0 and +1.0

Bloomberg Barclays Global Aggregate Index: Measures global investment grade debt from twenty four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers.

Standard & Poor's 500 Total Return Index: A weighted index consisting of the 500 stocks in the S&P 500 Index, which are chosen by Standard & Poor's based on industry representation, liquidity and stability. The stocks in the S&P 500 Index are not the 500 largest companies, rather the index is designed to capture the returns of many different sectors of the U.S. economy. The Total Return calculation includes the price-plus-gross cash dividend return. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.
