GRANT PARK®
LIQUID ALTERNATIVE STRATEGIES

GRANT PARK MULTI ALTERNATIVE STRATEGIES FUND

GPAAX, GPACX, GPAIX, GPANX

Experience

Since 1989, DCM (Advisor) and EMC (Sub-advisor) have continuously offered alternative investment funds designed to enhance portfolio diversification.

566 W. Adams St., Suite 300, Chicago, IL 60661 | 800.217.7955

There is no guarantee that any investment will achieve its objectives, generate positive returns, or avoid losses.

Consider your alternatives. Invest smarter.®

Fund Overview

Investment Philosophy

- Pursue competitive, risk-adjusted returns.
- Maintain low correlations to equity and fixed income investments.
- Operate strict risk management.

Investment Program

- Multiple quantitative strategies that are actively-managed.
- Investment universe consists of domestic and international commodity, currency, fixed income, and equity markets.
- Investments are identified using multiple parameters, including momentum and trend variables.

Advisor

Dearborn Capital Management, LLC

Since 1989, Dearborn has offered liquid alternative funds.

Sub-advisor

EMC Capital Advisors, LLC

Since 1988, EMC has specialized in the research, development, and operation of alternative investments funds.

Historical Performance

Annual Returns
Jan 2014 - Mar 2022

Superior Diversification

Annualized Correlation
Jan 2014 - Mar 2022

*60% S&P 500 TR index; 40% Bloomberg Barclays Global Agg Index

All charts prepared by Dearborn Capital Management. For performance data current to the most recent month end, please call toll-free 855.501.4758 or visit our website, grantparkfunds.com. Current performance may be lower or higher than the performance data quoted above. Past performance is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that investors' shares, when redeemed, may be worth more or less than their original cost. **The Fund's total annual operating expenses are 1.78%, 2.53%, 1.53%, and 1.78% for Class A, C, I and N respectively.** Please review the Fund's prospectus for more information regarding the Fund's fees and expenses.

Executive Summary

One Fund.

- The Fund seeks to provide positive absolute returns
- Enhanced asset allocation across 60+ global markets
- Independent, quantitative strategies
- Enhanced portfolio diversification
- Morningstar category: Macro Trading
- Inception: December 31, 2013

Four Strategies.

	Commodities	Short-term Rates	Global Financials	Upside Capture
Markets	Energies Grains, foods, industrials Metals	< 3 year duration	Fixed income Currencies Equities	Fixed income Gold Equities

Analyst Notes

Portfolio Construction

- **Extensive quantitative analysis generates portfolio exposure.**
- **Active risk management is applied at every level of the portfolio.**
- **Performance is driven by actively managed, independent strategies.**

All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities

Portfolio Implementation

Strategies	Average Exposure	# Systems	Systems			
			<u>Momentum</u>		<u>Trend</u>	
			S1	S2	S3	S4
Global Financials	39%	4				
Commodities	23%	4				
Short-term Rates	7%	3				
Upside Capture	31%	1	Long-only			

Systems utilize proprietary trading processes that attempt to capture directional price movement.

- ***Momentum: Analyzes velocity and price direction within ~15 day periods***
- ***Trend: Attempts to confirm price trends over multiple longer-term periods***
- ***Long-only: Active rebalancing across diversified sectors***

All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities

Trading systems react to market movement

Each system independently initiates long or short positions based on discrete price, volatility, risk, and time data.

The chart above is for educational purposes only and does not represent trades initiated by the Fund.

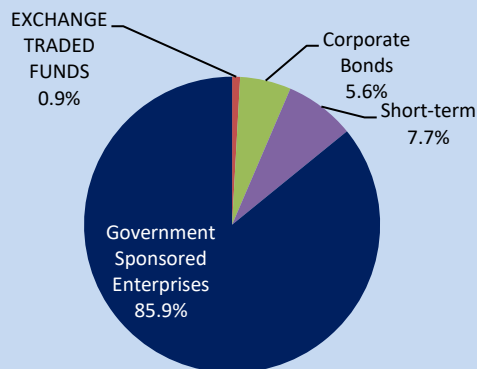

All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities

Fund Level Cash Management

- Cash not required to execute the primary strategies is invested in a fixed income portfolio.
- The portfolio investments are:
 - Highly liquid
 - High quality
 - Low duration

Portfolio by Security Type

As of Mar 31, 2022

Portfolio Duration

Morningstar Disclosure

© 2022 Morningstar. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics.

Morningstar Percentile Rankings are based on the average annual total returns of the funds in the category for the periods stated and do not include any sales charges or redemption fees. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. Rankings for each share class will vary due to different expenses.

Important Risk Information

MUTUAL FUNDS INVESTING INVOLVES RISK INCLUDING POSSIBLE LOSS OF PRINCIPAL.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Grant Park Multi Alternative Strategies Fund. This and other important information about the Fund is contained in the Prospectus, which can be obtained by calling 855.501.4758. The Prospectus should be read carefully before investing. The Grant Park Multi Alternative Strategies Fund is distributed by Northern Lights Distributors, LLC., member FINRA/SIPC. Dearborn Capital Management is not affiliated with Northern Lights Distributors, LLC.

Investing in fixed-income securities may involve certain risks, including the credit quality of individual issuers, market or economic developments and yields and share price fluctuations due to changes in interest rates. When interest rates go up, bond prices typically drop, and vice versa.. *High quality is defined as B or better.*

Important Risk Information continued

Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. There is a risk that issuers and counterparties will not make payments on securities and other investments held by the Fund, resulting in losses to the Fund. Derivative instruments involve risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. There could be an imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract or the Fund may have to sell at a disadvantageous time.

The success of hedging strategies depends on the advisor's or sub-advisor's ability to correctly assess the correlation between the instrument and portfolio being hedged and may result in loss. In general, the price of a fixed income and U.S Government security falls when interest rates rise. Currency trading risks include market risk, credit risk and country risk. Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards. Sovereign Debt investments are subject to the risk that a governmental entity may delay or refuse to pay interest or repay principal. Using derivatives to increase the Fund's combined long and short exposure creates leverage, which can magnify the Fund's potential gain or loss.

Short positions may be considered speculative transactions and involve special risks, including greater reliance on the advisor's ability to accurately anticipate the future value of a security or instrument. Underlying funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in an underlying fund.

By investing in commodities indirectly through the Subsidiary, the Fund will obtain exposure to the commodities markets within the federal tax requirements that apply to the Fund, which may be taxed at less favorable rates than capital gains. The Subsidiary will not be registered under the Investment Company Act of 1940 ("1940 Act") and, unless otherwise noted in the Prospectus, will not be subject to all of the investor protections of the 1940 Act.

Certain Fund investments may be difficult to purchase or sell, preventing the Fund from selling such illiquid securities at an advantageous time or price. The Fund may have investments that appreciate or depreciate significantly in value over short periods of time, causing the Fund's value per share to increase or decline over short periods of time.

Standard & Poor's 500 Total Return Index: A weighted index consisting of the 500 stocks in the S&P 500 Index, which are chosen by Standard & Poor's based on industry representation, liquidity, and stability. The stocks in the S&P 500 Index are not the 500 largest companies, rather the index is designed to capture the returns of many different sectors of the U.S., economy.

The Total Return calculation includes the price-plus-gross cash dividend return. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

Morningstar Macro Trading Category: Macro trading strategies, using either systematic or discretionary methods, look for investment opportunities by studying such factors as global economy, government policies, interest rates, inflation and market trends. As opportunists, these funds are not restricted by asset class and may invest across such disparate assets as global equities, bonds, currencies and commodities, and make extensive use of derivatives. Although these strategies aim to provide returns that are not correlated to traditional market indexes over a full market cycle, they can take significant directional long or short positions on any asset class over short periods and may have relatively high portfolio turnover.

Long/short equity: An investment strategy generally associated with hedge funds. It involves buying equities that are expected to increase in value and selling short equities that are expected to decrease in value.

Multialternative: Funds that use a combination of alternative strategies such as taking long and short positions in equity and debt, trading futures, or using convertible arbitrage, among others.

Managed Futures: Portfolios made up of actively managed futures contracts designed to provide portfolio diversification. Funds trade long/short and provide exposure to traditional and non-traditional asset classes.

Broad Basket Commodities: Long only strategy that tracks the price of goods including but not limited to grains, minerals, metals, livestock, cotton, oils, sugar, coffee and cocoa.

MSCI All World Index: Represents performance of the full opportunity set of large- and mid-cap stocks across 23 developed and 26 emerging markets.

Barclays Global Agg Bond Index: Measures global investment grade debt from twenty four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers

Correlation: A statistical measure of the degree to which two securities move in relation to each other. Correlations are computed as the correlation coefficient, which has a value that must fall between -1.0 and +1.0.

Beta: Beta is a measure of the volatility or systematic risk of a security compared to the market as a whole.

Standard Deviation: A statistic measure of the dispersion of a dataset relative to its mean and is calculated as the square root of the variance. The standard deviation is calculated as the square root of variance by determining each data point's deviation relative to the mean.

Down Capture: A statistical measure of an investment manager's overall performance in down-markets. The ratio is calculated by dividing the manager's returns by the returns of the index during the down-market and multiplying that factor by 100.
