# Fund Overview

## Investment Philosophy

- Pursue competitive, risk-adjusted returns.
- Maintain low correlations to equity and fixed income investments.
- Operate strict risk management.

## Investment Program

- Multiple quantitative strategies that are actively-managed.
- Investment universe consists of domestic and international commodity, currency, fixed income, and equity markets.
- Investments are identified using multiple parameters, including momentum and trend variables.

## Advisor

*Dearborn Capital Management, LLC*

Since 1989, Dearborn has offered liquid alternative funds.

## Sub-advisor

*EMC Capital Advisors, LLC*

Since 1988, EMC has specialized in the research, development, and operation of alternative investments funds.

*\*60% S&P 500 TR index; 40% Bloomberg Barclays Global Agg Index*

All charts prepared by Dearborn Capital Management. For performance data current to the most recent month end, please call toll-free 855.501.4758 or visit our website, [grantparkfunds.com](http://grantparkfunds.com). Current performance may be lower or higher than the performance data quoted above. Past performance is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that investors' shares, when redeemed, may be worth more or less than their original cost. **The Fund's total annual operating expenses are 1.71%, 2.46%, 1.46%, and 1.71% for Class A, C, I and N respectively.** Please review the Fund's prospectus for more information regarding the Fund's fees and expenses.

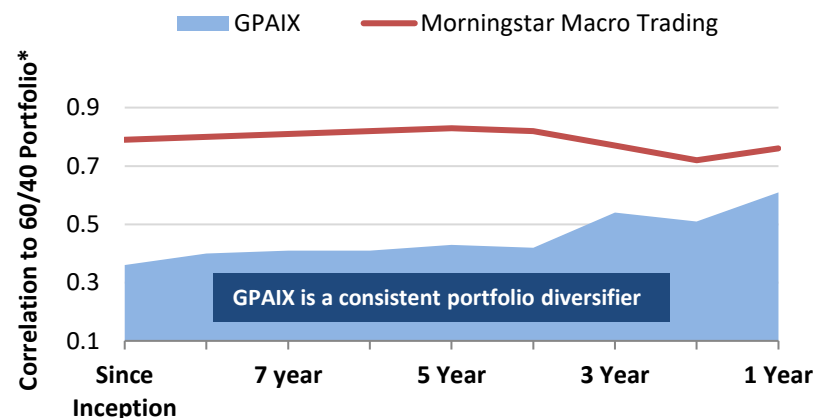

## Historical Performance

Annual Returns  
Jan 2014 - Mar 2023

## Superior Diversification

Annualized Correlation  
Jan 2014 - Mar 2023

# Executive Summary

## One Fund.

- The Fund seeks to provide positive absolute returns
- Enhanced asset allocation across 60+ global markets
- Multiple independent, quantitative strategies
- Enhanced portfolio diversification
- Morningstar category: Macro Trading
- Inception: December 31, 2013

## Multiple Sectors.

	Commodities	Short-term Rates	Global Financials	Upside Capture
Markets	Energies Grains, foods, industrials Metals	< 3 year duration	Fixed income Currencies Equities	Fixed income Gold Equities
Avg. exposure (Jan '14 – Mar '23)	23%	7%	38%	32%

Jan 2014 - Mar 2023	Portfolio Diversification GPAIX vs S&P 500 TR Index	
Correlation	0.33	Low correlation
Beta	0.16	Low sensitivity
Standard Deviation	7.44%	Reduced volatility
Down Capture	15.27%	Minimal downside

Morningstar Percentile Rankings are based on the average annual total returns of the funds in the category for the periods stated and do not include any sales charges or redemption fees. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. Rankings for each share class will vary due to different expenses. All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities

# Portfolio Diversification

## Average Sector Exposure

Jan 2014 - Mar 2023

## Execution transparency

- The Fund does not trade swaps, options, or volatility-hedging strategies.
- Active strategies exclusively invest via government-regulated exchanges.
- All investments are marked-to-market each business day.
- Portfolio NAV is calculated daily by an independent, third-party calculation agent.

All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities

### Firm information

Founded in 1988

*All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities*

# Investment Philosophy

EMC was founded in 1988 to create transparent, rules based investment strategies that achieve five objectives:

1. **DEVELOP** programs that produce *long-term positive returns*.
2. **EMBED** comprehensive risk management into *every* investment program.
3. **AVOID** *excessive loss of capital, over-concentration risk, and erratic volatility*.
4. **IDENTIFY** potential investments using extensive *quantitative analysis*.
5. **EXECUTE** transactions via *automated, systematic trading* systems.

The pursuit of those objectives has allowed EMC to manage multiple, global-macro investment programs with the following characteristics:

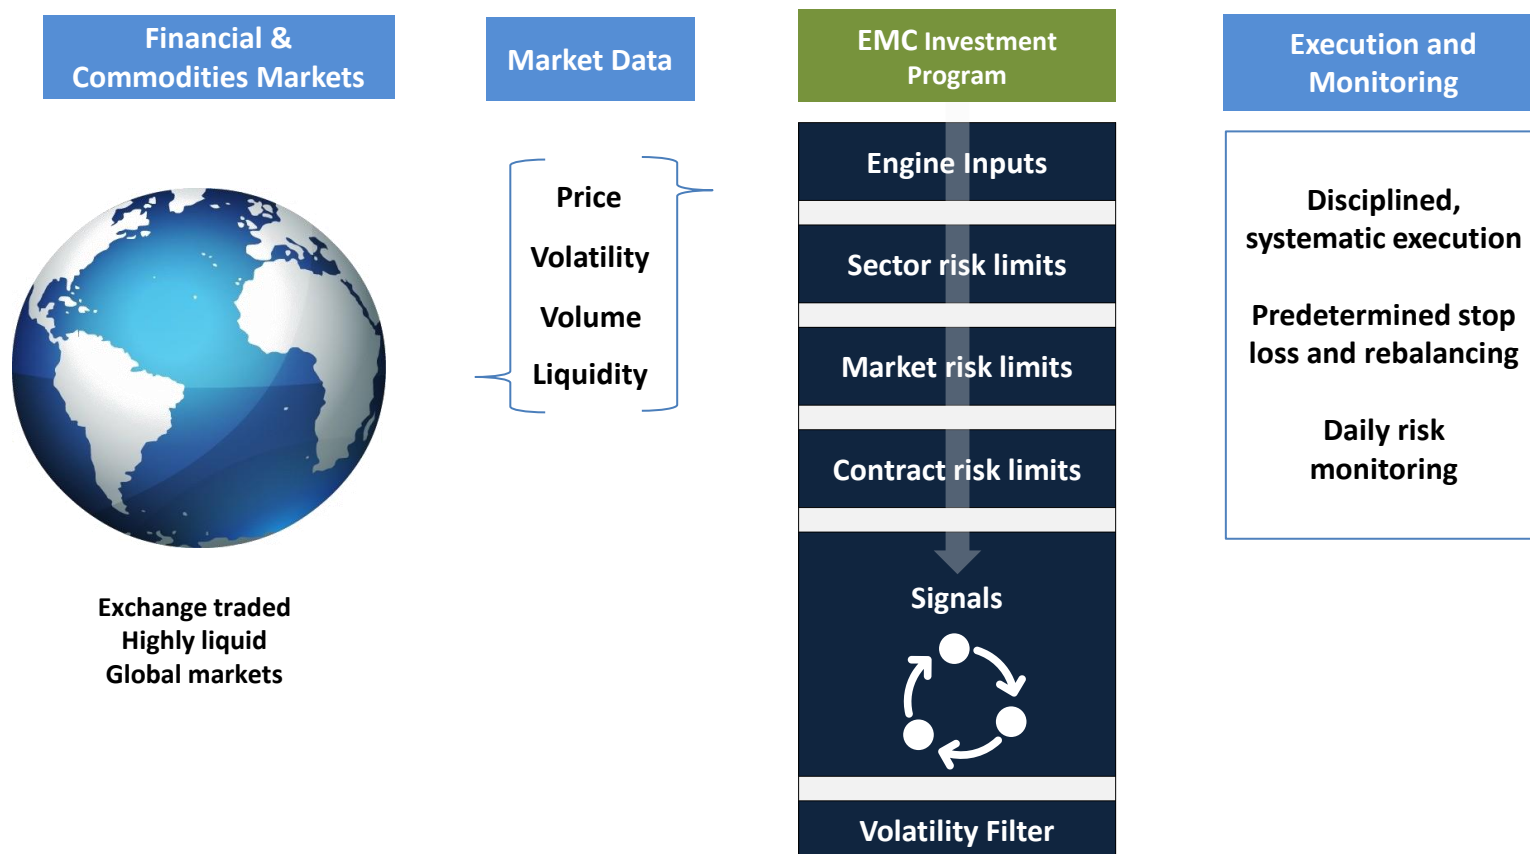

- **Positive** long-term returns.
- **Diversified** returns across the global markets in which its programs invest.
- **Low correlations** to equity, currency, fixed income and commodity markets.
- **Superior performance** as measured by the Sharpe ratio and Upside/Downside capture, among others.

*All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities*

# Investment Program Implementation

- Extensive quantitative analysis generates portfolio exposure.
- Active risk management is applied at every level of the investment engine.
- Daily risk monitoring.

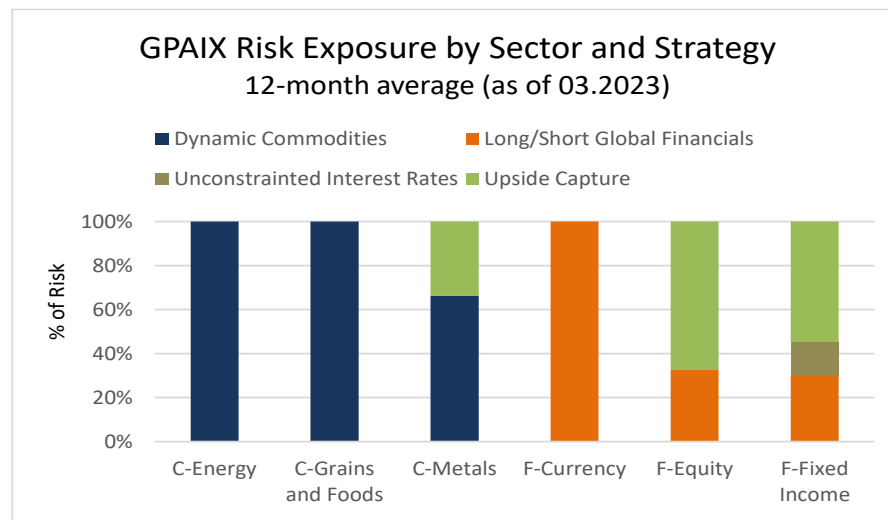

*All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities*

*There is no guarantee that any investment will achieve its objectives, generate returns, or avoid losses.*

**Consider your alternatives. Invest smarter.®**

# Grant Park Multi Alternative Strategies Fund Investment Universe

## Focus

- Invest in diverse global commodity and financial markets.
- Minimize downside risk through actively managed long and short trading.
- Embed a long bias in select markets that historically exhibited upward price movement.

## Walk away

*The Fund's strategic approach has generated a blend of long-term positive returns with low volatility.*

Jan 2014 - Mar 2023		Portfolio Diversification GPAIX vs S&P 500 TR Index	
Correlation	0.33	Low correlation	
Beta	0.16	Low sensitivity	
Standard Deviation	7.44%	Reduced volatility	
Down Capture	15.27%	Minimal downside	

*All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities*

# Investment Methodology

Logic	Examples of data used in Price Trend and Momentum systems
Look back periods	<ul style="list-style-type: none"><li>• Short: 7-20 days</li><li>• Medium: 20-35 days</li><li>• Long: 35-250+ days</li></ul>
Price pattern identification	<ul style="list-style-type: none"><li>• Number of closing prices above or below a given point</li><li>• Price velocity and magnitude</li><li>• Price over multiple look-back periods</li><li>• Potential entry and exit points</li></ul>
Trade optimization	<ul style="list-style-type: none"><li>• Attempt to identify trades with the best:<ul style="list-style-type: none"><li>• Risk adjusted return</li><li>• Highest return, lowest drawdown</li><li>• Best Sharpe Ratio</li></ul></li></ul>
Trade Filters	<ul style="list-style-type: none"><li>• Each trade clears multiple filters, including a volatility screen</li></ul>
Trade execution	<ul style="list-style-type: none"><li>• All trades are executed systematically</li><li>• Positions have predetermined entry and exit points</li></ul>

All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities

## Trading systems react to market data

*Each system independently initiates long or short positions based on discrete price, volatility, risk, and time data.*

The chart above is for educational purposes only and does not represent trades initiated by the Fund.

All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities

# Investment example: Investment in the RBOB Gasoline market

- Multiple systems operate independently to drive diversified returns.
- Each system uses discrete inputs that generate signals with varying trade direction, entry price, and exit price.

*The price charts below illustrate the diversity of the trading systems within the same market*

## Price Trend

*Attempts to confirm an established trend*

## Momentum

*Attempts to identify early emergence of a trend*

**Green = Profitable trade, Red = Unprofitable trade, Black=No trade, L = Long, S = Short (L and S do not represent all trades)**

*All charts prepared by Dearborn Capital Management. Past performance is no guarantee of future results. Diversification does not assure a profit or protect against loss in a declining market. This information should not be considered a recommendation to buy and sell securities. **CHARTS ABOVE IS FOR ILLUSTRATIVE PURPOSES ONLY.***

# Risk Management by Value at Risk (VaR)

- **Actively managing risk is the key to limiting downside risk and maximizing upside opportunities.**
- VaR is measured at the contract, market, sector, and portfolio levels.
- Position size is based on multiple factors, including AUM, market volatility, market weight and system weight.
- Contract initiation is driven by:
  - Is additional “risk” available?
  - Is the quantitative engine generating a long or short signal?
- EMC constantly monitors risk to determine whether market activity has changed the risk value for a contract.

## Important Risk Information

### MUTUAL FUNDS INVESTING INVOLVES RISK INCLUDING POSSIBLE LOSS OF PRINCIPAL.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Grant Park Multi Alternative Strategies Fund. This and other important information about the Fund is contained in the Prospectus, which can be obtained by calling 855.501.4758. The Prospectus should be read carefully before investing. The Grant Park Multi Alternative Strategies Fund is distributed by Northern Lights Distributors, LLC., member FINRA/SIPC. Dearborn Capital Management is not affiliated with Northern Lights Distributors, LLC.

Investing in fixed-income securities may involve certain risks, including the credit quality of individual issuers, market or economic developments and yields and share price fluctuations due to changes in interest rates. When interest rates go up, bond prices typically drop, and vice versa. *High quality is defined as B or better.* Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. There is a risk that issuers and counterparties will not make payments on securities and other investments held by the Fund, resulting in losses to the Fund. Derivative instruments involve risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. There could be an imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract or the Fund may have to sell at a disadvantageous time.

The success of hedging strategies depends on the advisor's or sub-advisor's ability to correctly assess the correlation between the instrument and portfolio being hedged and may result in loss. In general, the price of a fixed income and U.S Government security falls when interest rates rise. Currency trading risks include market risk, credit risk and country risk. Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards. Sovereign Debt investments are subject to the risk that a governmental entity may delay or refuse to pay interest or repay principal. Using derivatives to increase the Fund's combined long and short exposure creates leverage, which can magnify the Fund's potential gain or loss.

Short positions may be considered speculative transactions and involve special risks, including greater reliance on the advisor's ability to accurately anticipate the future value of a security or instrument. Underlying funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in an underlying fund.

## Important Risk Information continued

*By investing in commodities indirectly through the Subsidiary, the Fund will obtain exposure to the commodities markets within the federal tax requirements that apply to the Fund, which may be taxed at less favorable rates than capital gains. The Subsidiary will not be registered under the Investment Company Act of 1940 ("1940 Act") and, unless otherwise noted in the Prospectus, will not be subject to all of the investor protections of the 1940 Act.*

*Certain Fund investments may be difficult to purchase or sell, preventing the Fund from selling such illiquid securities at an advantageous time or price. The Fund may have investments that appreciate or depreciate significantly in value over short periods of time, causing the Fund's value per share to increase or decline over short periods of time.*

**Standard & Poor's 500 Total Return Index:** A weighted index consisting of the 500 stocks in the S&P 500 Index, which are chosen by Standard & Poor's based on industry representation, liquidity, and stability. The stocks in the S&P 500 Index are not the 500 largest companies, rather the index is designed to capture the returns of many different sectors of the U.S., economy. The Total Return calculation includes the price-plus-gross cash dividend return. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

**Macro Trading:** Macro trading strategies, using either systematic or discretionary methods, look for investment opportunities by studying such factors as global economy, government policies, interest rates, inflation and market trends. As opportunists, these funds are not restricted by asset class and may invest across such disparate assets as global equities, bonds, currencies and commodities, and make extensive use of derivatives. Although these strategies aim to provide returns that are not correlated to traditional market indexes over a full market cycle, they can take significant directional long or short positions on any asset class over short periods and may have relatively high portfolio turnover.

**Long/short equity:** An investment strategy generally associated with hedge funds. It involves buying equities that are expected to increase in value and selling short equities that are expected to decrease in value.

**Multistrategy:** Funds that offer investors exposure to two or more alternative investment strategies through either a single manager or multimanager approach. Funds in this category typically have a majority of their assets exposed to alternative strategies, but at a minimum, alternatives must comprise greater than 30% of the strategy's gross exposure. The category includes funds with static allocations to alternative strategies as well as those that tactically adjust their exposure to different alternative strategies and asset classes.

**Managed Futures:** Portfolios made up of actively managed futures contracts designed to provide portfolio diversification. Funds trade long/short and provide exposure to traditional and non-traditional asset classes.

**Broad Basket Commodities:** Long only strategy that tracks the price of goods including but not limited to grains, minerals, metals, livestock, cotton, oils, sugar, coffee and cocoa.

**MSCI All World Index:** Represents performance of the full opportunity set of large- and mid-cap stocks across 23 developed and 26 emerging markets.

**Barclays Global Agg Bond Index:** Measures global investment grade debt from twenty four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers

**Correlation:** A statistical measure of the degree to which two securities move in relation to each other. Correlations are computed as the correlation coefficient, which has a value that must fall between -1.0 and +1.0.

**Beta:** Beta is a measure of the volatility or systematic risk of a security compared to the market as a whole.

**Standard Deviation:** A statistic measure of the dispersion of a dataset relative to its mean and is calculated as the square root of the variance. The standard deviation is calculated as the square root of variance by determining each data point's deviation relative to the mean.

**Down Capture:** A statistical measure of an investment manager's overall performance in down-markets. The ratio is calculated by dividing the manager's returns by the returns of the index during the down-market and multiplying that factor by 100.
